YOUR LOCAL DEALER/DISTRIBUTOR:

Handy Hitch

The HANDY HITCH is overbuilt in every way and provides obvious benefits by enabling your tractor to stay on the level road while the mower cuts the steepest slope!

This superior design provides a lifetime of value and performance today and down the road.

The benefits are obvious.

HANDY HITCH

COST-SAVING PERFORMANCE

Compatibility The HANDY HITCH can be connected to any brand of rotary mower, pull style or three point hitch.

Smart Design Level tractor operation results in balanced lubrication levels and less wear and tear on tires, rims, bearings, gears and other working parts.

Since your tractor is sitting on top of the road, there is no need for costly, larger front wheel assist tractors.

The skid plate, bolted on the ditch side axle, allows the hitch to be pulled through heavy moisture areas which wouldn't normally be accessible. This unique feature also prevents the hitch from getting caught over the edge of a hidden culvert or hole.

Maneuverability The HANDY HITCH hydraulic cylinder can be extended or retracted to maneuver around obstacles, keeping the tractor closer to the cutting area and off the middle of the road.

Built to Perform A heavy duty frame, quality construction, minimal moving parts and ease of service add up to make the HANDY HITCH the leader in offset hitch technology.

GREATER PRODUCTIVITY

With the HANDY HITCH, your tractor operator has a birds eye view of the mowing area. More efficient operation of your equipment results in increased productivity and savings.

Mow 30 - 50% more in a day by cutting full width on steep slopes at the same speed as flat ditches. Eliminate re-cutting time of grass flattened by tractor tires.

Just one pull of the safety pin and the HANDY HITCH moves from transport to working position.

SAFETY & COMFORT

The HANDY HITCH's level operation virtually eliminates the risk of rollovers. This, along with smoother operation and less bouncing, helps keep your operator safer, healthier and happier on the job.

A lifetime of high performance that pays off with less down time and breakdown costs.
